One of the Nations Largest Regional Occupational Centers Selects OPRA

Marina del Rey, CA - The North Orange County Regional Occupational Center, one of the largest in the United States, selected the OPRA CMMS system to manage it's over 35 locations throughout the county. The Center will utilize OPRA for both facilities maintenance and computer technology services. With so many facilities geographically dispersed, and with a high turnover rate of part time classroom instructors, the logistics of servicing all needs from a central location almost mandates an easy to use Internet based solution such as OPRA.

The OPRA browser based system uses familiar Internet buttons, navigation conventions and forms which make training less of an issue than with traditional stand alone systems. Clients may utilize OPRA's server sites which feature carrier redundancy, system redundancy and ultra-high security. OPRA users may at any time elect to run the software from its own local servers from a menu of operating system and database configurations including LINUX, MS-NT/2000/2003 using MS-SQL, MYSQL or even MS-ACCESS.

PPS Systems, Inc. is a privately held company with headquarters in Marina del Rey, California. The service that is described above relates to a natural expansion of the utilization of the company's expertise and services available. Interested parties may contact PPS at 800-545-4888 or email at sales@opras.net.
